

Sovereign identity at the heart of your operations

Continuum Identity unifies the management of physical and digital identities across your business applications.

Our mission

Continuum Identity's core mission is to deliver a sovereign solution that unifies physical and digital identities — simply and securely.

Continuum Identity has built a toolkit that empowers every team working on sensitive projects to ensure complete security among colleagues and prevent the exposure of confidential data.

Continuum Identity serves every sector that needs to secure assets, people, places and resources: commercial real estate, sensitive sites, high-end residential, and industrial environments.

The Continuum Identity SaaS platform is sovereign by design. Its core infrastructure is hosted in France and Switzerland to guarantee security, confidentiality and compliance across your operations.

To extend that same sovereignty anywhere in the world, infrastructure can be deployed rapidly in other countries. Your data stays hosted as close as possible to your operations, in line with local regulations.

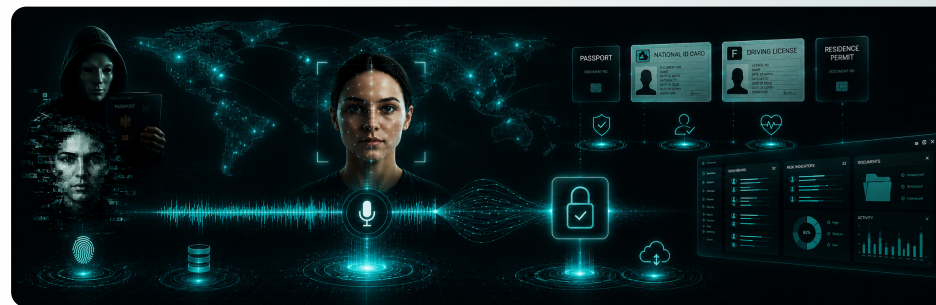

Built entirely on open-source technologies, the platform is subject to no extraterritorial legislation that could allow a foreign government to access your data beyond your control.

As identity theft accelerates, the world evolves relentlessly, and artificial intelligence blurs the lines — driven in particular by the rise of deepfakes — relying on technologies built to meet these new challenges is no longer optional.

Continuum Trust authenticates more than 16,000 identity documents worldwide (passports, national ID cards, driver's licenses, and more) and verifies that the person presenting them is genuinely real and alive.

The platform also incorporates voice recognition to confirm that anyone seeking access to sensitive information is genuinely authorized to do so.

Scenario I

Authenticate your customers in seconds before every interaction.

Your customers can opt in to a voice-recognition program through a simple enrollment process that takes less than 20 seconds.

Once enrolled, the customer is authenticated naturally on their next call, simply by speaking with their advisor. The process runs in the background from the very first greeting: *"Hello, this is Mr. Dupont. I'm calling about my account..."*

Verification is then complete. You know who is calling (voice recognition), from which registered device (phone and calling number) and, if needed, your customer can also enter a secret code known to them alone.

Simple, flexible, and delivering an optimal level of security.

Scenario II

Simplify visitor registration before they even arrive

Say goodbye to long, tedious queues at reception. With Continuum TRUST, your visitors can complete their pre-registration with complete peace of mind, from the comfort of their own home.

All you have to do is send them a secure link. Their details are extracted automatically from their identity document, whose authenticity is verified. The user then confirms their identity with a simple video selfie.

Once the checks are validated, the visitor is pre-registered. On arrival, you can grant them access automatically through facial recognition — only within the time window you have defined.

Simple, fast, and fully secure.

Continuum Key is the only key your teams need to access their workspaces. Once enrolled, they gain automatic entry to authorized areas. Access rights are managed in seconds — permanently or temporarily — to meet the needs of employees, visitors, service providers and contractors with ease.

Available as a hybrid public or private SaaS through CID Box technology, the sovereign Continuum Identity platform guarantees a high level of security, confidentiality and data control.

Sovereign cloud

No infrastructure to manage

No more costly, complex infrastructure to maintain (servers, backups, and the like) or system versions to update.

Precise control over access and processes

Manage access rights with precision and track every action in real time for security you stay in command of.

Remote identity verification

Authenticate your employees and visitors remotely, with no need to travel.

Simple, intuitive interface

A smooth, modern user experience for fast, effective adoption.

Guaranteed operation, even offline

Synchronization via CID Box keeps access control running, even without an internet connection.

One account for all your tools

Access all your modules and features from a single secure account.

A sovereign, end-to-end hybrid SaaS solution that combines the benefits of the cloud with those of an on-premises deployment.

Continuum Business is a CRM (Customer Relationship Management) that adapts to your business applications. It lets you manage your contacts — individuals and companies alike — simply and securely.

Beyond the standard features of a CRM, Continuum Business lets you choose from a range of applications tailored to your line of business.

Take advantage of advanced reporting capabilities, with a dashboard, filterable and customizable reports, and pivot tables — all directly within the application.

Business applications

Real estate management

Manage your properties, agents and sales or rental contracts. Prepare your proposals straight from the CRM.

Partnership management

Manage your distribution channels effectively and effortlessly.

Cost and price-list management

Customize your price lists for each of your customers while factoring in your costs.

Commission management

Manage your teams' commissions with full transparency.

Manage your budget forecasts

Tie your budget and sales forecasts to each partner.

In its standard version, the application lets you build your catalog by adding your customers, products and their prices. This catalog forms the foundation of your commercial activity and your future proposals.

Then create one or more sales pipelines, fully customizable to your own processes. Draw up your quotes, track their progress at every stage, and steer your opportunities effectively through to close.

Can't find your business application? Let's start the conversation and add it to the list.

Continuum Identity is a French solution developed entirely by French engineers, drawing on more than 20 years of deep expertise in securing people and places to make digital security accessible to all.

Take back control of your access and your identities

If protecting your people, sites, resources and data is a priority,
let's talk — with a demonstration of our sovereign platform
dedicated to identity management and access security.

Continuum Identity was founded in April 2025, born of the experience its founder, Nicolas Garcia, gained over more than 20 years in access control and biometrics, notably within global leaders such as IDEMIA and GALLAGHER.

The company is built on a simple observation: the physical and digital security of organizations all too often remain siloed. It offers a unified, smoother and more secure approach to identity management, bringing together within a single platform the technologies essential to authentication and access control.

Beyond its platform, Continuum Identity also develops bespoke features to meet the specific needs of each organization.
